Bone Scraper
Straight

3214-11BL
Replacement Blade

Bone scraper is an ideal tool for quick and easy harvesting autologous bone material. It is used for scraping, collection and transplantation of autologous bone. Saws, and trephine bone filters are no longer necessary. During scraping, the bone is collected in a chamber, and simultaneously mixed with the blood. The bone material can be implanted directly. Often the collected bone material is mixed with bone grafting and bone graft material to use their osteoinductive effect.
